WEB DEVELOPMENT
LAB REPORT

Experiments 1, 2 and 3

1	**Sweet Bakery** Bakery products, prices and special offer
2	**City Care Hospital** Departments, doctors and appointment form
3	**Healthy Food World** Food categories, recipes, meal plan and tips

Name	SAISRIDURGA
Section	CSM
Roll No.	26001075

1. Introduction

This report documents three static web page projects built as part of the Web Development Lab. Each project is a complete, single-page website for a different real-life domain: a bakery, a hospital and a healthy-food information site. All three were written as HTML files and tested in a web browser from the local computer (files web exp 1.html, web exp 2.html and web exp 3.html).

The purpose of the three experiments is progressive practice. The first project focuses on layout, navigation and product cards. The second adds an appointment request form with several input types. The third adds richer content such as recipe cards, a data table and a bulleted list. Together they cover the basic building blocks used in most websites.

2. Overview of the Three Projects

Exp.	Project	Domain	Short description
1	Sweet Bakery	Food retail	Bakery home page showing products with prices, a special offer and contact details.
2	City Care Hospital	Healthcare	Hospital page with departments, doctors, an appointment request form and visiting hours.
3	Healthy Food World	Health and nutrition	Information page with food categories, recipes, a daily meal plan and eating tips.

3. Tools and Technologies Used

All three projects were created with the same simple toolset, which is enough for static web pages that need no server.

Tool / Technology	Purpose in the projects
HTML5	Structure of every page: header, navigation links, sections, headings, paragraphs, images, buttons, form fields (Exp. 2), table and lists (Exp. 3).
CSS3	Styling: colour themes, centred layouts, card boxes with rounded corners and shadows, button styles, spacing and fonts.
Code editor (Visual Studio Code)	Writing and saving the HTML files.
Web browser (Microsoft Edge)	Opening the local files and checking the output of each page.
Images and emoji	Pictures for the product, department, doctor and food cards; emoji used beside the page titles.

4. Common Page Structure

- Header with the site name and a tagline.
- Navigation bar with links to the main sections.
- Welcome (hero) section with a short message and a call-to-action button.
- Content sections shown as cards, a form, a table or a list.
- Footer with contact details and a copyright line.

Experiment 1: Sweet Bakery

Aim

To design and develop a web page for a bakery that presents a welcome section, a set of bakery products with prices, a special offer and contact information, using HTML and CSS.

Description

Sweet Bakery is an online display page for a small cake shop. The header carries the shop name with the tagline "Fresh Cakes, Sweet Memories!" and is followed by a navigation bar (Home, Cakes, Offers, Contact). A welcome section with an "Explore Cakes" button leads the visitor to the products. The page uses a maroon and pink colour theme that suits a bakery.

Main Sections and Features

- Header and navigation bar with four links.
- Welcome section with the Explore Cakes button.
- Our Bakery Items: three product cards, each with a photo, name, short description and price - Chocolate Cake (Rs. 500), Sweet Pastry (Rs. 100) and Cupcakes (Rs. 80).
- Special Offer section announcing 10% off on selected cakes.
- Contact Us footer with e-mail, phone number and copyright.

Tools Used

HTML5, CSS3, Visual Studio Code, Microsoft Edge.

Output Screenshots

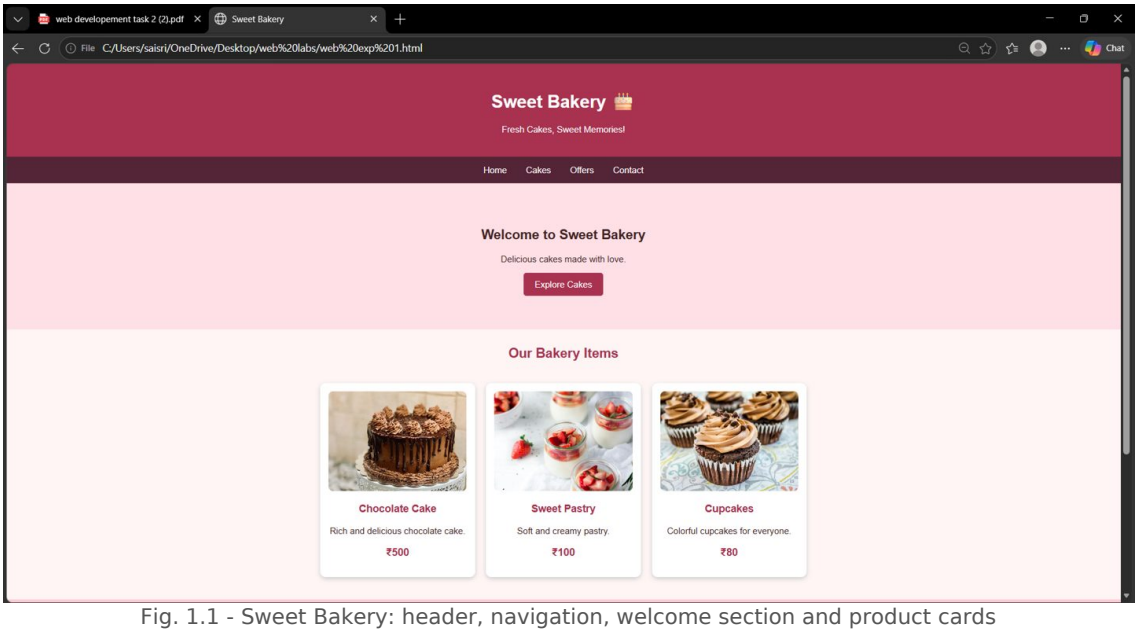

Fig. 1.1 - Sweet Bakery: header, navigation, welcome section and product cards

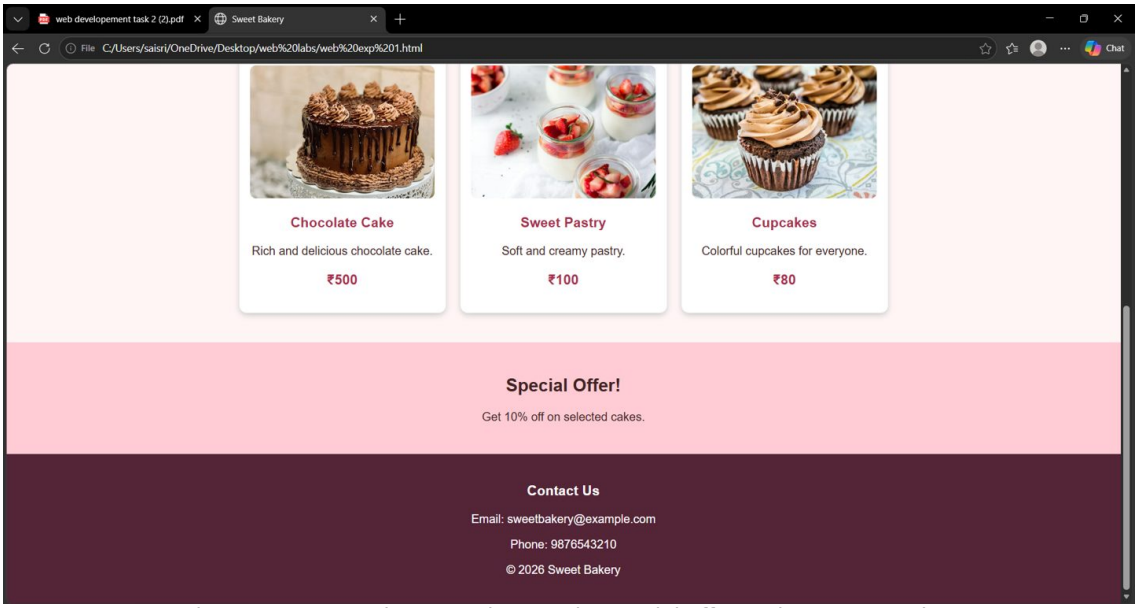

Fig. 1.2 - Sweet Bakery: product cards, special offer and contact section

Conclusion

The Sweet Bakery page shows how a simple product catalogue can be built with a clear header, card layout and footer. It gave practice in page structure, images, colours and text formatting.

Experiment 2: City Care Hospital

Aim

To design and develop a hospital web page that shows departments and doctors and lets a visitor fill in an appointment request form, using HTML form elements and CSS.

Description

City Care Hospital is an informational page for a hospital with the tagline "Your Health, Our Priority". The navigation bar has five links (Home, Departments, Doctors, Appointment, Contact). A teal and white colour theme gives a clean, medical look. Unlike Experiment 1, this page includes user input in the form of an appointment request form.

Main Sections and Features

- Welcome section with a Book Appointment button.
- Our Departments: three cards - Cardiology, General Medicine and Emergency Care - each with an image and a short description.
- Our Doctors: two cards - Dr. Ravi Kumar (Cardiologist) and Dr. Priya Sharma (General Physician) - with photos.
- Request an Appointment form with Patient Name, Email, Phone Number, a Select Department drop-down list, an Appointment Date picker (dd-mm-yyyy) and a Submit Request button.
- Visiting Hours: Monday to Saturday, 9:00 AM to 6:00 PM, with emergency services available 24/7.
- Contact Us footer with address (Vijayawada, Andhra Pradesh), emergency number 108, e-mail and copyright.

Tools Used

HTML5 (including form elements), CSS3, Visual Studio Code, Microsoft Edge.

Output Screenshots

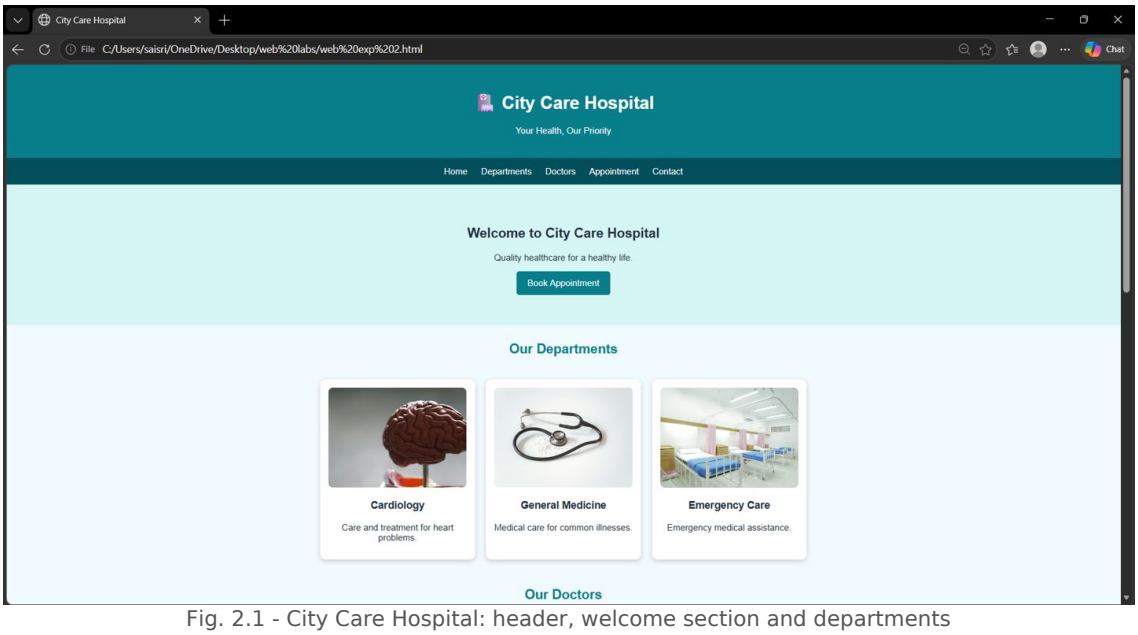

Fig. 2.1 - City Care Hospital: header, welcome section and departments

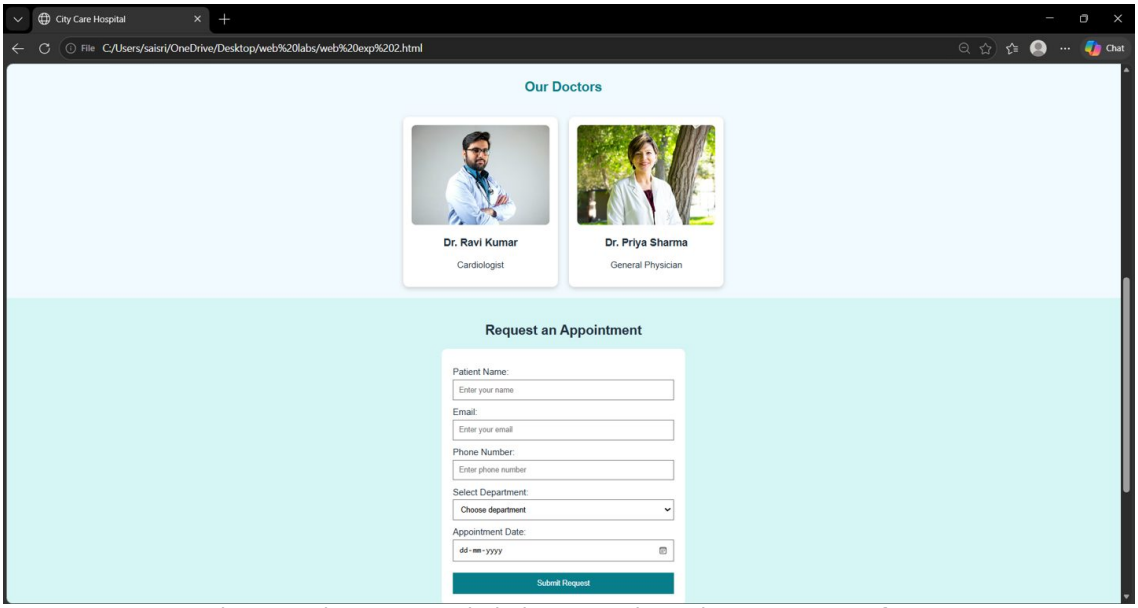

Fig. 2.2 - City Care Hospital: doctors and appointment request form

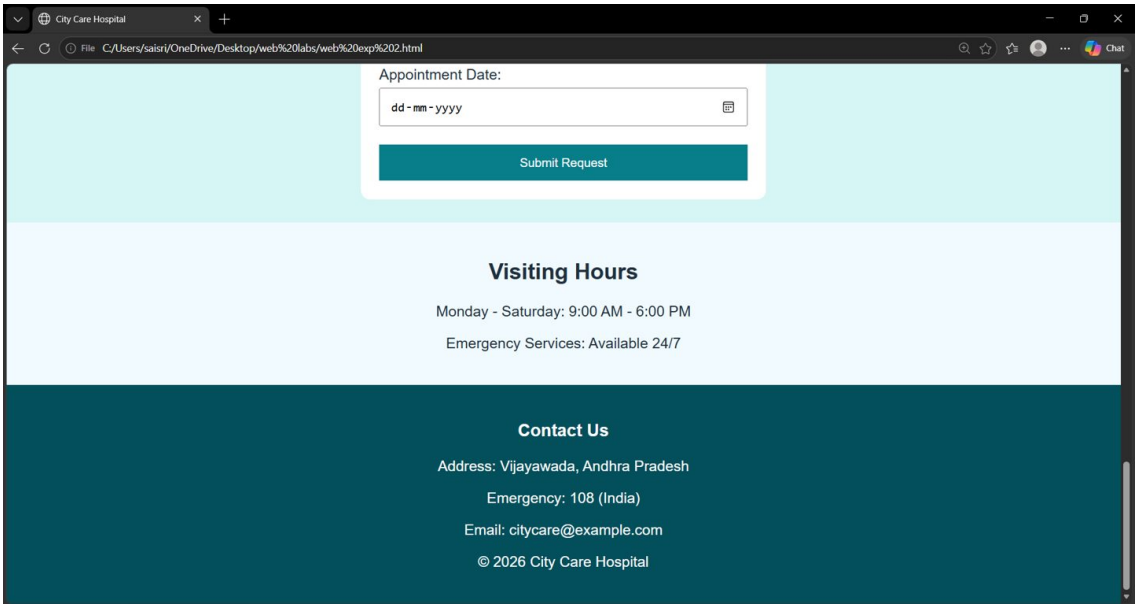

Fig. 2.3 - City Care Hospital: end of form, visiting hours and contact section

Conclusion

This project introduced form design with text boxes, a drop-down list and a date field, along with card layouts for departments and doctors. It shows how a service-based website collects basic details from visitors.

Experiment 3: Healthy Food World

Aim

To design and develop an information web page about healthy eating that uses cards, a table and a list to present food categories, recipes, a meal plan and health tips, using HTML and CSS.

Description

Healthy Food World is an educational page with the tagline "Eat Healthy, Stay Healthy!". The navigation bar has five links (Home, Healthy Food, Recipes, Health Tips, Contact). A green colour theme reflects the fresh-food subject. This is the most content-rich of the three pages, because it combines cards, a table and a list in a single layout.

Main Sections and Features

- Welcome section with an Explore Food button.
- Healthy Food Categories: three image cards - Fresh Vegetables, Fresh Fruits and Healthy Salads.
- Healthy Recipes: three text cards - Vegetable Salad (100 kcal), Fruit Bowl (150 kcal) and Oats Breakfast (250 kcal) - each listing ingredients, preparation and estimated calories per serving.
- Simple Daily Meal Plan: a two-column table (Meal and Food) for breakfast, lunch, evening snack and dinner.
- Healthy Eating Tips: a bulleted list of five tips.
- Contact Us footer with e-mail, a closing message and copyright.

Tools Used

HTML5 (including table and list elements), CSS3, Visual Studio Code, Microsoft Edge.

Output Screenshots

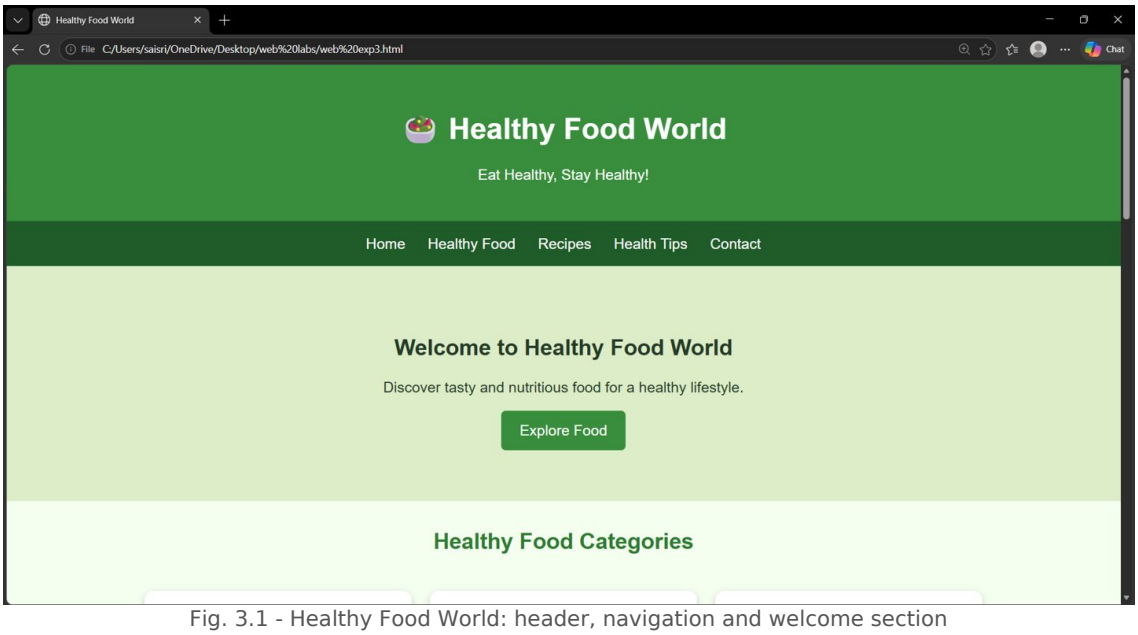

Fig. 3.1 - Healthy Food World: header, navigation and welcome section

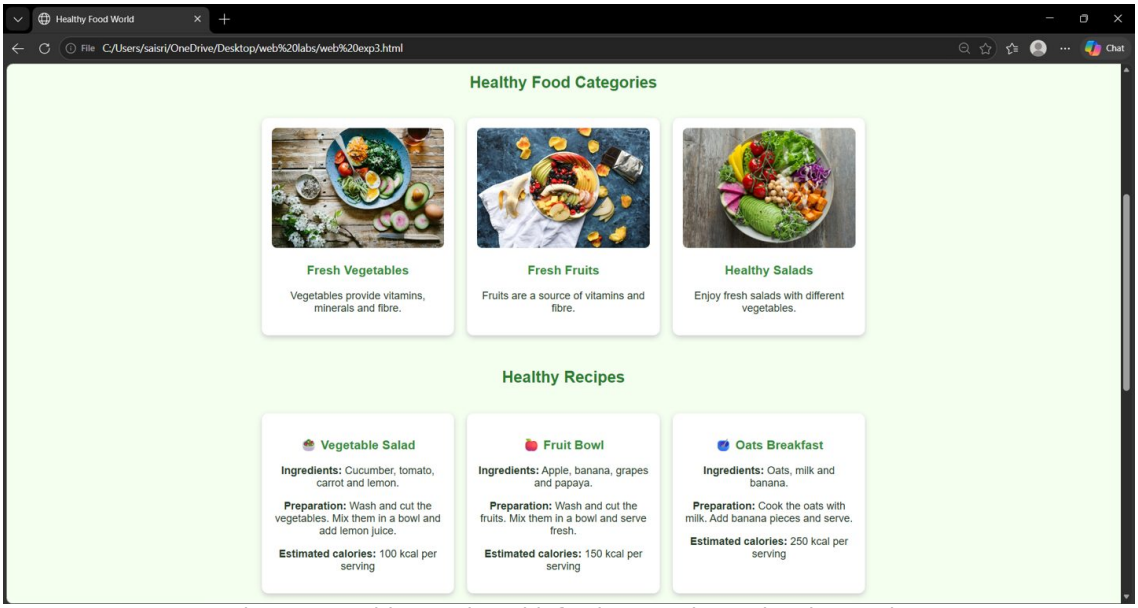

Fig. 3.2 - Healthy Food World: food categories and recipe cards

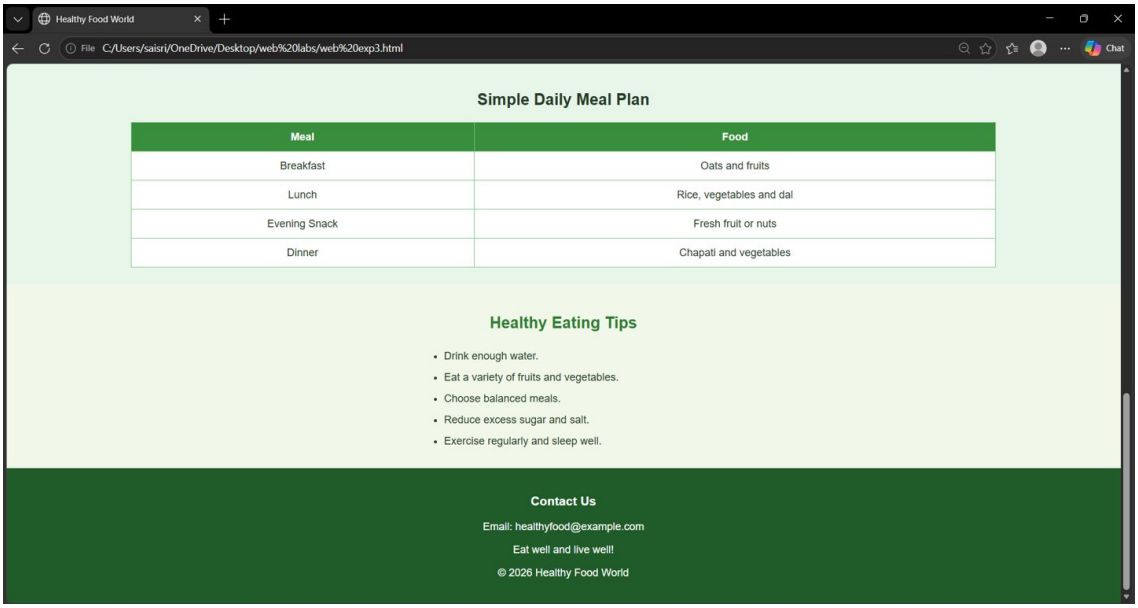

Fig. 3.3 - Healthy Food World: meal plan table, eating tips and contact section

Conclusion

The project gave practice in presenting different kinds of content - cards, a table and a list - on one page, while keeping a consistent colour theme and layout.

Comparison of the Three Projects

Feature	Exp. 1: Sweet Bakery	Exp. 2: City Care Hospital	Exp. 3: Healthy Food World
Domain	Food retail	Healthcare	Health and nutrition
Tagline	Fresh Cakes, Sweet Memories!	Your Health, Our Priority	Eat Healthy, Stay Healthy!
Colour theme	Maroon and pink	Teal and white	Green
Navigation links	4	5	5
Call-to-action button	Explore Cakes	Book Appointment	Explore Food
Card sections	1 (3 product cards)	2 (3 department + 2 doctor cards)	2 (3 category + 3 recipe cards)
Images	3 product photos	5 photos (departments and doctors)	3 food photos
User input form	No	Yes - 5 fields and a Submit button	No
Table	No	No	Yes - daily meal plan
List	No	No	Yes - 5 eating tips
Special content	Prices and 10% offer	Visiting hours and emergency info	Recipes with calories
Main purpose	Show and promote products	Provide services and take appointment requests	Educate and inform
Complexity	Basic	Medium (form elements)	Medium (table, list and recipes)

Key Observations

- All three pages share the same skeleton: header, navigation, welcome section, content sections and footer.
- Only Experiment 2 collects user input, so it is the only one that works as an interactive page.
- Only Experiment 3 uses a table and a bulleted list, so it displays the widest variety of content.
- Experiment 1 is the simplest and is a good base for learning cards, images and colours.
- Each project uses its own colour theme to match its subject, which shows how CSS changes the feel of the same layout.

Overall Conclusion

The three experiments together cover the essential parts of front-end web design: page structure, navigation, cards, images, forms, tables, lists and consistent styling. Moving from a simple product page to a form-based page and then to a content-rich page builds the skills needed to design larger, more complete websites.
